

Special Issue

Risk Management Challenges for Sustainability and Wellbeing –2nd Edition

Message from the Guest Editors

This Special Issue aims to continue the work of the previous Issue entitled “Risk Management Challenges for Sustainability and Wellbeing”. In today’s “Anthropocene” world, human impacts on ecological life support systems are increasingly complex and far-reaching. Several scholars have focused on how the concepts of vulnerability and resilience may be employed in the analysis of future sustainability and wellbeing. While much of the existing literature on vulnerability and resilience is sector- or country-specific, in this volume we propose a more holistic approach that allows for the sustainability of human well-being to be analyzed as a whole. Moreover, while the majority of studies consider vulnerability and resilience as aspects of the sustainability of a “system”, i.e., a society, a country, an organization, or even the whole planet, this volume’s focus is on the interrelated dimension of well-being. In particular, this publication considers the exposure to risk and the ability to manage it.
